

a

Three validation levels

Group-summary agreement

Does the simulated population reproduce the summary statistic?

What a generator blind to individuals achieves

Reproduced by construction

Marginal distributional fidelity

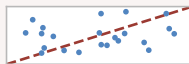

Are simulated values draws from the observed distribution?

Reproduced by construction

Paired individual fidelity

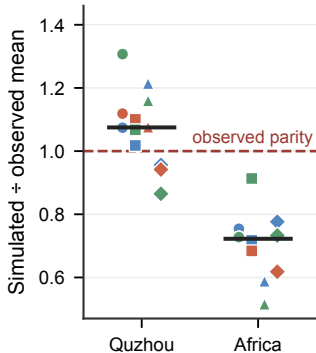

Does the agent for person i reproduce the decision of person i ?

Not reproduced at all

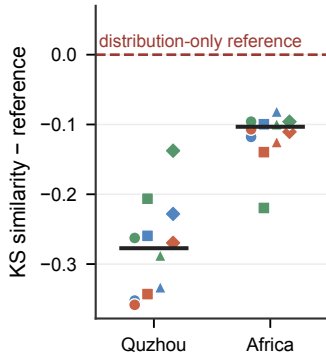

b

Group-summary agreement

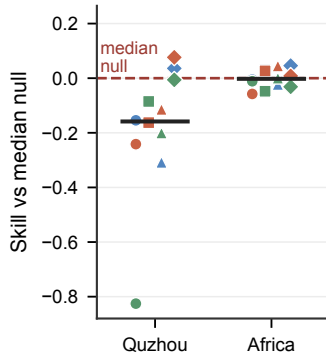

c

Marginal distribution

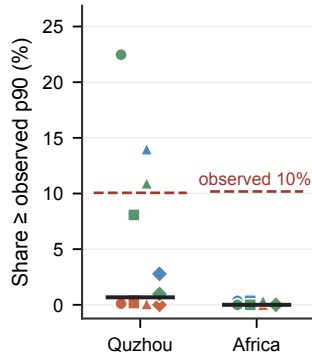

d

Individual error

e

Upper tail
